AI Bootcamp – Final Project Guidelines

Overview

As we approach the conclusion of the AI Bootcamp, students are required to begin work on their Final Project, which is a mandatory requirement for earning the bootcamp completion certificate.

This project is designed to assess your ability to apply the concepts, tools, and techniques learned throughout the bootcamp in a complete, end-to-end manner.

Final Project Expectations

- The Final Project must be end-to-end, covering the full workflow from problem definition to results.
- This project serves as your capstone, showcasing your understanding and practical skills acquired during the bootcamp.

Students are expected to demonstrate:

- Clear problem identification
- Appropriate methodology
- Sound technical implementation
- Logical analysis and conclusions

Project Tracks (Choose One)

Students may choose one of the following tracks for their Final Project:

Computer Vision: Focus on image-based problems such as classification, detection, recognition, or similar applications.

Natural Language Processing (NLP) / Large Language Models (LLMs): Work on text-based problems such as sentiment analysis, summarization, chatbots, information retrieval, or LLM-based solutions.

What Is a Project Proposal?

The project proposal is a short written document outlining your intended Final Project.

It should clearly include:

- Project idea and objective
- Problem statement
- Why the problem is important or relevant
- High-level approach or methodology

The purpose of the proposal is to ensure that your project is:

- Relevant to the chosen track
- Technically feasible within the given time
- Appropriately scoped

Approval is required before proceeding with full implementation

Key Dates

- Proposal Submission Deadline: **3rd October, 2026**
- Proposal Review & Feedback:
- Trainers will review submitted proposals and:
  - Approve the project if it is feasible and relevant, or
  - Request revisions if the scope or approach needs improvement

⚠️ Important: Final project submissions will NOT be accepted after the deadline.

Trainer Support & Contact Information

Students may reach out to the assigned trainers for guidance related to their selected project track.

For Computer Vision Projects

- Trainer: Mr. Khawir Mehmood
- Email: **khawir@gmail.com**
- CC: **learning@atomcamp.com**

For LLM/NLP Projects

- Trainer: Mr. Muhammad Umair
- Email: **muhammadumair894@gmail.com**
- CC: **learning@atomcamp.com**

Assignments & Portals Update

- As students begin working on their Final Project proposals:
  - All pending assignments will be placed on hold
  - Assignment submission portals will be temporarily closed
- Assignment portals will be reopened after final project presentations
- Students will be given sufficient time to complete any remaining assignments after the final project submission

Attendance & Completion Reminder

- Students who have maintained good attendance are encouraged to complete the Final Project on time to ensure certification.

- You have made significant progress - this final step is crucial to successfully completing the bootcamp.

Need Help or Have Questions?

If you require any assistance or clarification regarding your Final Project:

- **Email: learning@atomcamp.com**

The team is available to provide additional support and ensure you are set up for success.

Next Step

Start preparing and submitting your Final Project Proposal before the deadline to secure approval and move forward.

We look forward to seeing your ideas come to life.

Good luck - build something transformative and agent-driven!
